

SAMIR SHAIKH

Full Stack Developer

Surat, Gujarat, India | Open to Remote

+91 8320927182 shaikh.samir.work@gmail.com linkedin.com/in/samirshaikh-dev github.com/samirshaikh-dev Portfolio

SUMMARY

Full Stack Developer with production experience building resilient web applications using **React, Next.js, Node.js, and TypeScript**, backed by **PostgreSQL, MongoDB, and Redis**. Proven track record owning features end-to-end — from relational schema design and granular **RBAC** to production **GraphQL microservices** and low-latency REST APIs. Experienced in database query optimization (~**30% latency reduction**), third-party integrations, and delivering in Agile sprint cycles.

EXPERIENCE

Full Stack Developer Intern

Aug 2026 – Sep 2026

Xira Infotech

Vapi

- Rebuilt an existing static job portal into a fully dynamic platform solo in one month, taking it from hardcoded data to a production-ready system end-to-end.
- Designed a PostgreSQL schema to replace static data, and built the Node.js/Express REST API from scratch to serve it.
- Converted the existing Next.js frontend from static to fully dynamic, wiring it to the new API for job listings, search, and applications.
- Built role-based access control (RBAC) and admin dashboards from scratch, and integrated a payment gateway to move the platform from demo to production-ready.
- Utilized AI-assisted development workflows to accelerate architecture planning, feature implementation, and debugging across the application stack.

Backend Developer Intern

Sep 2025 – May 2026

Logicwind

Surat

- Architected and developed scalable server-side Node.js microservices driven by production GraphQL APIs (Apollo Server), authoring schema definitions, custom resolvers, and event-driven data pipelines.
- Reduced GraphQL API response times by ~30% for real users by executing PostgreSQL schema and query migrations, eliminating resolver bottlenecks with DataLoader, and implementing Redis caching layers.
- Integrated third-party APIs including Dittofeed, Reoon Email Verifier, and Loops into GraphQL mutation workflows to automate transactional email and contact validation pipelines.
- Leveraged AI tooling to accelerate schema generation, resolver boilerplate scaffolding, and unit test drafting.
- Partnered with QA and frontend teams in Agile sprint cycles to diagnose production issues, resolve edge-case bugs, and maintain technical documentation.

PROJECTS

AI Customer Ticket - Support Automation Platform

Full Details

Node.js, TypeScript, Express.js, Next.js, React.js, GraphQL, PostgreSQL, Sequelize, Redis, BullMQ, Docker, Docker Compose, Prometheus, Grafana

- Architected a 6+ Express.js microservice backend integrating LLM-based classification via API, leveraging AI-assisted development (AI IDEs, OpenCode/Kilocode) to rapidly iterate on the classification and scoring pipeline.
- Built a high-performance dual-frontend dashboard using Next.js and React with Context API-driven state management, implementing HTTP Long Polling for sub-second real-time ticket synchronization, SLA monitoring, and dynamic AI scoring.
- Deployed a comprehensive DevOps and observability stack using Docker Compose, Prometheus, and Grafana to establish reliable distributed tracing and metric visualization across all microservices.

Sahara Tyre – WhatsApp Campaigner

Full Details

Node.js, Express, React Native, Expo, TypeScript, Google Sheets API, WhatsApp Web API, GitHub Actions, Render

- Architected a high-throughput WhatsApp marketing platform with a React Native (Expo) mobile client consuming Node.js/Express.js REST APIs, automating personalized bulk messaging campaigns and streamlining business workflows for end-users.
- Engineered a highly concurrent Google Sheets-backed API featuring rate-limited batch processing, optimizing message delivery and ensuring strict third-party API compliance.
- Implemented robust `whatsapp-web.js` session management with continuous state synchronization via Socket.io, and automated zero-downtime deployments using GitHub Actions and Render.

Eventify – Full-Stack Event Management Platform

Full Details

Node.js, Express.js, TypeScript, React, MongoDB, GraphQL (Apollo), Mongoose, Tailwind CSS, shadcn/ui, JWT, Node-mailer, Framer Motion

- Developed a comprehensive full-stack event management platform using React, Vite, Tailwind CSS, and shadcn/ui, delivering a fully responsive, cross-browser-tested interface with seamless CRUD operations and automated email invitations.
- Designed and implemented robust data models in MongoDB using Mongoose, powering a scalable REST/GraphQL API architecture with optimized connection pooling, rate limiting, and secure CORS configuration.
- Engineered a secure authentication pipeline featuring strict Role-Based Access Control (RBAC), JWT session management, bcrypt password hashing, SHA-256 OTP verification, and end-to-end Zod payload validation.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL
Frontend: React.js, Next.js, Redux Toolkit, Context API, Tailwind CSS, shadcn/ui, HTML5, CSS3
Backend & APIs: Node.js, Express.js, GraphQL (Apollo Server/Client), REST APIs, Socket.io, JWT, Webhooks, Prisma ORM, Sequelize ORM
Databases & Caching: PostgreSQL, MongoDB, Redis, Firebase (Firestore, Auth)
DevOps & Architecture: Docker, Docker Compose, BullMQ, Prometheus, Grafana, GitHub Actions (CI/CD), Git, Postman
Core Concepts & AI Tools: RBAC, RESTful Design, Query Optimization, AI Tooling (Cursor, Claude, Copilot), LLM API Integration, Jest

CERTIFICATIONS

Basics of Cloud Computing Fundamentals of Cloud Computing	Udemy	<i>Oct 2025</i>
CyberSecurity Bootcamp Course	Udemy	<i>Oct 2025</i>

EDUCATION

Bachelor of Technology in Information Technology	2022 – 2026
Uka Tarsadia University	CGPA: 7.99/10
